

HOW THE BODY WORKS

Cells That Keep You Well

Directions: Match the immune system cell with its function.
Draw a line from the cell to its mission.

B cell

Mission: To devour invaders and launch the immune system attack.

Killer cell

Mission: To coordinate immune system attack by recruiting and activating other immune system cells.

Cytotoxic T cell

Mission: To tag invaders with antibodies so other immune system cells will know to destroy them.

Macrophage

Mission: To devour invaders or release toxic chemicals that kill invaders.

Memory cell

Mission: To destroy infected body cells before the virus has a chance to multiply.

Helper T cell

Mission: To make immune responses faster next time invader comes around.
